

USE **VitalOxide**
AGAINST CORONAVIRUS (COVID-19)

June 25, 2020

Please be aware of the following guidelines regarding the use of Vital Oxide™ against Coronavirus (COVID-19):

VITAL OXIDE™ has been authorized by HEALTH CANADA & the EPA for use against SARS-CoV-2, the Coronavirus that causes COVID-19. We meet the requirements for emerging viral pathogens showing efficacy against enveloped and non-enveloped viruses both large and small.

To use Vital Oxide™ against SARS-CoV-2, the EPA recommends to follow the directions for use against Norovirus Feline Calicivirus and Canine Parvovirus on hard, non-porous surfaces. These viruses require full strength product with kill times of 5 minutes and 10 minutes respectively.

Therefore, we recommend:

- Use of Vital Oxide™ at full strength
- If fogging please increase nozzle to larger droplet size and apply liberally
- No PPE required if sprayed, wiped or mopped
- N95 mask and goggles recommended if fogged (20-minute re-entry)
- Full daily disinfection of all surfaces
- Disinfection of frequently touched surfaces multiple times a day (i.e. Spray, wipe or fog doorknobs, light switches, railings, desks, toilets, faucets, sinks, and electronics)
